

African Savanna

The African grasslands stretch across the continent below the Sahara. In a square of land about the size of a living room, children will see animals they might have encountered only at the zoo...discover the rewards and dangers of their natural home...and observe how these creatures live with each other in a changing, endangered environment. It's an exciting journey of discovery, coming to you from the One Small Square series of interactive science and nature books...where the next stop could be as near as your backyard or as far as half a world away.

Typical tropical savanna in Northern Australia demonstrating the high tree density and regular spacing characteristic of many savannas. A savanna or savannah is a mixed woodland grassland ecosystem characterised by the trees. Recent studies show that many of the world's savannas, including famed southern African landscapes, are experiencing significant change as LOCATION: Savannas are comprised mostly of grasses and a few scattered trees.
