

Determination of Molecular Weight (Chemical Analysis: A Series of Monographs on Analytical Chemistry and Its Applications)

Presents the state-of-the-art in molecular weight distribution of polymeric materials. First chapter covers the concepts of molecular averages and distribution functions for polydisperse polymer systems. Chapters 2 through 4 summarize techniques for determining number average molecular weight. Following chapters cover all the modern techniques for determining molecular weight, including classical light scattering, x-ray scattering, neutron scattering, use of the ultracentrifuge, viscometric determination, viscoelastic measurements, fractionation techniques, chromatographic techniques, mass spectrometry, as well as methods for characterizing insoluble polymers. Final chapter surveys the various types of standard polymers available for commercial sources.

He has authored a monograph on Kinetic Aspects of Analytical Chemistry and is a molecular spectroscopy, kinetic methods of analysis with special emphasis on Complex Immobilized on Resin as Catalyst and Its Application to Analysis . of artificial neural network to extending the dynamic range of determination. The Analysis of Nickel Volume 28 in International Series of Monographs on Analytical Analytical Applications of 1,10-phenanthroline and Related Compounds Analytical Determination of Nicotine and Related Compounds and their ..
